

# James Keenan

Wake Forest, NC 27587 | [James.Keenan3403@gmail.com](mailto:James.Keenan3403@gmail.com) | [linkedin.com/in/mrfreep](https://linkedin.com/in/mrfreep) | [mrfreep.com](https://mrfreep.com)

Full stack developer with project experience building responsive web applications across front end interfaces, backend services and data layers. Developed two end to end applications using React, Node.js, Express, REST APIs, MongoDB, SQL, authentication and automated testing. Pursuing Software Engineer I, Junior Full Stack Developer and Internal Applications roles with 10+ years of high volume service experience shaping practical problem solving, customer awareness and clear team communication.

## Technical Skills

**PROGRAMMING:** JavaScript, TypeScript, HTML5, CSS3, SQL

**FRONT END:** React, Redux, API, Next.js, CSS, Responsive UI

**BACK END & APIs:** Node.js, Express.js, REST APIs, JSON, JWT, bcrypt, Authentication, Authorization

**DATA:** MongoDB, Mongoose, SQL, Local Storage

**TESTING & QUALITY:** Jest, Supertest, React Testing Library, API Testing, Unit, Debugging

**TOOLS & DELIVERY:** Git, GitHub, Postman, VS Code, Vercel

## Experience

**Software Engineering Fellow, 2025 to 2026, Springboard**

### FreepLink | Full Stack Social Platform | 2026

- Built a MERN social platform supporting groups, posts, comments, reactions, invitations and notifications across responsive React components and Node.js and Express APIs.
- Secured user access with JWT, bcrypt and role based permissions to create controlled experiences for members and administrators.
- Structured reusable React components and Context based state to simplify updates across connected social features.
- Added Jest and Supertest coverage for core backend behavior and used iterative debugging to improve reliability before deployment.

### Space Travel Web Application | October 2025

- Developed a React logistics application that models spacecraft inventories, planetary destinations, dispatch decisions and travel routes through a modular interface.
- Connected mock API data and Local Storage to preserve application state and support repeatable user workflows.
- Implemented input validation, error handling and reusable components to guide users through incomplete or invalid actions.
- Tested route and dispatch behavior through scenario based debugging and refined interface flow based on observed results.

## Progressive Service & Operations Roles | 2014 to Present

The Red Bar | Fort Walton Beach, FL

- Earned progressive responsibility across 10+ years in a high volume restaurant environment through dependable service, sound judgment and consistent follow through.
- Coordinated team priorities during high volume shifts and adapted assignments and communication as customer and operational demands changed.
- Resolved time sensitive guest and workflow issues by gathering facts, clarifying options and following concerns through completion.
- Translated fast changing information into clear direction for coworkers and guests and built communication habits now applied to technical troubleshooting and team delivery.

## Education & Training

**Software Engineering Certification, Springboard, 2026**
